1. Product Overview

RG-02 is an indoor LoRaWAN gateway. Supports Semtech data packet transponders and LoRaWAN base station functions, and is compatible with standard LoRaWAN protocols.

The high-frequency RG-02 gateway adopts the combination design of SX1302 LoRa RF baseband chip + 2x SX1250 RF front-end, supports 10 programmable parallel demodulator paths. The gateway supports Wi-Fi, Ethernet, 3G/4G cellular network access, and can be easily deployed to various application sites.

The RG-02 is preset with a variety of standard LoRaWAN frequency band options, which can adapt to different countries and regions. And it also supports user-defined frequency bands to build a private LoRa network.

RG-02 can communicate with ABP LoRaWAN terminal nodes without LoRaWAN server, and the data parsing and forwarding functions are realized by the gateway itself. This lightweight deployment method is very convenient for system integrators to access existing IoT applications directly without building LoRaWAN servers or using third-party LoRaWAN services.

1.1. Characteristic

- Open-source OpenWrt system
- Web GUI and SSH are managed through LAN or WiFi
- Analog 49x LoRa demodulator
- LoRaWAN Gateway
- 10 programmable parallel demodulator paths
- Pre-configured to support different LoRaWAN regional settings
- Allow custom region parameters
- Support different levels of logon
- Supports Semtech data packet transponders
- Support LoRaWAN base stations
- 3G/4G cellular connection

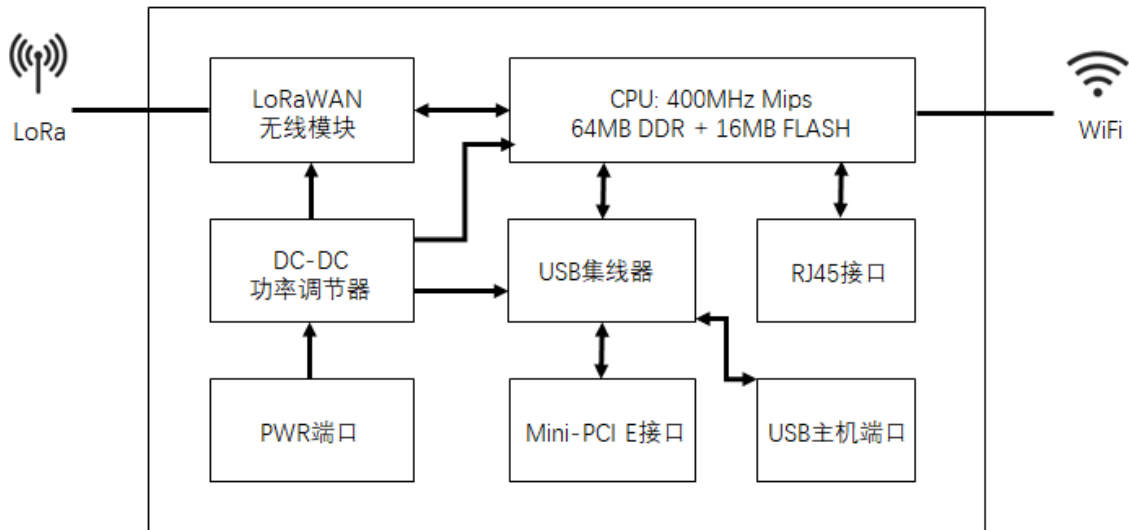

Figure 1 RG-02 gateway architecture

1.2. Specification parameter

- Hardware system:
 - ✓ AR9331 400MHz
 - ✓ 64MB memory
 - ✓ 16MB flash memory
- API:
 - ✓ 10M/100M RJ45 port x 1
 - ✓ WiFi:802.11 b/g/n
 - ✓ LoRaWAN Wireless
 - ✓ PowerWAN: 5V DC, 2A, Type C
 - ✓ USB 2.0 host connector x 1
 - ✓ Mini PCI E connector X 1
 - ✓ SX1302+2 x SX1250

- WiFi norm:
 - ✓ IEEE 802.11 b /g/n
 - ✓ Band: 2.4~2.462GHz
 - ✓ 11n transmit power: mcs7/15:11db mcs0:17db
 - ✓ 11b transmit power: 18db
 - ✓ 11g 54M transmit power: 12db
 - ✓ 11g 6M transmit power: 18db
 - ✓ 11g 54M sensitivity: -71dbm
 - ✓ 11n 20M sensitivity: -67dbm

- ✓ LoRa specifications:
 - ✓ Sensitivity up to -140dBm
 - ✓ Suppression of 70 dB continuous wave interference at 1 MHz offset
 - ✓ Can work under the condition of negative SNR, CCR up to 9dB
 - ✓ Analog 49 x LoRa demodulator and 1 x(G)FSK demodulator
 - ✓ Dual digital transceiver radio front-end interface
 - ✓ 10 programmable parallel demodulator paths
 - ✓ Dynamic data rate (ADR) adaptive
 - ✓ Real Antenna Diversity or Real Simultaneous Dual Band

- Cellular 4G LTE:
 - ✓ Mini SIM card slot
 - ✓ Downstream data rate up to 150Mbps, upstream data rate up to 50Mbps
 - ✓ Global LTE, UMTS/HSPA + and GSM/GPRS/EDGE coverage
 - ✓ MIMO technology meets the requirements of modern wireless communication systems for data rate and link reliability.

2. Main parameters

Table 1 main parameters

Model	RG-02 high-frequency edition
LoRa solution	SX1302+2*SX1250
Max. output power	27dBm
Sensitivity	-140.0dBm
CPU	AR9331 400MHz
Memory	64MB DDR + 16MB FLASH
Size	12.0*12.0* 3.0(±0.2)cm
Antenna	Plastic rod antenna (LoRa) + paddle antenna (4G)
Working Band	EU868, IN865, RU864, KZ869
Frequency setting range	863-869MHz
Power supply	5V@2A
WiFi	IEEE 802.11 b/g/n
Ethernet network	10M/100M

3. Indicator light and button description

Table 5 indicator light status and key function table

Indicator light or button	Network Status	LED status or button function	Remarks
 wireless indicator light	Not defined	Not defined	/
 System indicator light	LoRaWAN server is not connected	The red light is always on	/
	Connecting to LoRaWAN server	Blue light flashing	
	Connected to LoRaWAN server	The blue light is always on	
 Ethernet indicator light	Not connected	Lights off	/
	Connected	The red light is always on and flashing (data activity)	
 Power Indicator	No power supply	Lights off	/
	Powered	The red light is always on	
Restore factory settings	/	Reset key	Long press to reset

4. Product Notes

RG-02 Gateway has built-in corresponding RF filters according to different frequency bands. When the gateway is configured to operate at frequencies other than the recommended frequency band, there will be high attenuation and the communication distance will be affected.
